BM3010
Baby Unit Pairing Quick Start Guide
(for use with BM3000 parent unit)

The new **BM3010** baby unit must be paired to the **BM3000** parent unit before use. Please refer to **BM3000** user's manual for complete instructions, including baby unit installation (see page 5-11).

Pair a new baby unit:

Make sure you power on the baby unit (see page 31 of the **BM3000** user's manual) and the parent unit (see page 33 of the **BM3000** user's manual) before pairing.

1. On the idle parent unit, press **M**.

2. Press ▲/▼ to choose **PAIR/UNPAIR CAM**, then press **M** or ▶.

3. Press **M** or ▶ again to choose **Pair new CAM**.

4. Press ▲/▼ to choose a desired baby unit slot, then press **M**.

5. Make sure the new baby unit is turned on. On the new baby unit, immediately press and hold + and - for 5 seconds when the parent unit screen displays **Please press both [+] and [-] keys on CAM side until POWER indicator flashes Red and Green light**. The ⏻ light on the new baby unit flashes red and green alternately.

6. When pairing is successful, the screen displays the image from the newly paired baby unit. The ⏻ light on the new baby unit turns green (when it is powered by AA batteries) or red (when it is powered by AC power).

NOTES

• If pairing fails, the screen displays pairing failed. Try the pairing process again.

• Only one baby unit can be paired at a time.
